

FD-173 Mitsuba Kansai (250 seeds/pack)

Growing Information

Germination

Soak the seeds in water overnight to encourage germination. Sow at 1/2" spacing and 1/4" deep and cover with a thin layer of soil.

Maintain moisture and warmth (~70°F+) through germination.

Thinning

Once established, thin to 1" spacing: remove any plants closer than 1" to allow remaining plants to grow.

Three weeks after sowing, thin again to 2-2.5" spacing.

Harvest

Harvest at 6-8" height, leaving 2" from the roots. You can harvest again after cutting if you add fertilizer after harvest.
